

# **LAB-07**

## Integrating Frontend and Backend

1. Install [Node.js](#) LTS (v20.x)
2. Create project (`npm create vue@latest`)
3. Install dependencies (`npm install`)
4. Run project in dev mode (`npx vite --host lvmxxxxx.sit.kmutt.ac.th`)
5. Build static web (`npm run build`)
6. Deploy with Nginx
  1. Create nginx conf file in /etc/nginx/sites-available with specified port and root
  2. Create symbolic link to this conf file in /etc/nginx/sites-enabled
  3. Test nginx config (`sudo nginx -t`)
  4. Reload nginx (`sudo nginx -s reload`)
  5. Test with curl
7. Allow specified port on Firewall

1. Install OpenJDK17 (`sudo apt install -y openjdk-17-jre-headless`)
2. Set JAVA\_HOME (`sudo echo JAVA_HOME=/usr/lib/jvm/java-17-openjdk-amd64/ >> /etc/environment`)
3. Create project (`curl -G https://start.spring.io/starter.zip -d dependencies=web -d type=maven-project -o demo.zip`)
4. Allow port 8080/tcp on Firewall
5. Run project with Maven (`./mvnw spring-boot:run`)
6. Build .jar file (`./mvnw clean package`)
7. Run .jar file (`java -jar target/*.jar`)

# Deploy DateAPI (Backend)

1. Clone DateAPI repository

`(git clone https://github.com/olarnr/int210-dateapi.git dateapi)`

2. Run project with Maven

3. Test with curl (`curl localhost:8080/api/date`)

4. Build .jar file

5. Run .jar file

6. Test with curl (`curl localhost:8080/api/date`)

7. Test on browser

1. Clone fetch-date repository

(`git clone https://github.com/olarnr/int210-fetchdate.git`  
`fetchdate`)

2. Modify API\_URL to

`http://lvm65999.sit.kmutt.ac.th:8080/api/date` in  
`src/App.vue`

3. Install dependencies

4. Run project in dev mode

5. Build static web

6. Deploy with Nginx

# Cross-Origin Resource Sharing

```
package com.example.demo;
import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;
import org.springframework.web.bind.annotation.GetMapping;
import org.springframework.web.bind.annotation.RequestParam;
import org.springframework.web.bind.annotation.RestController;

import java.util.Date;
import org.springframework.web.bind.annotation.CrossOrigin;
import org.springframework.web.bind.annotation.ResponseBody;

@SpringBootApplication
@RestController
@CrossOrigin(origins = "http://lvmolarn.sit.kmutt.ac.th:3000")
public class DemoApplication {
    public static void main(String[] args) {
        SpringApplication.run(DemoApplication.class, args);
    }
    @GetMapping("/hello")
    public String hello(@RequestParam(value = "name", defaultValue = "World") String name) {
        // ...
    }
}
```

<example/demo/DemoApplication.java" 47L, 1481C 14,62 Top

- Modify @CrossOrigin to allow access from your vm port 3000 and 5173

# Assignment 4

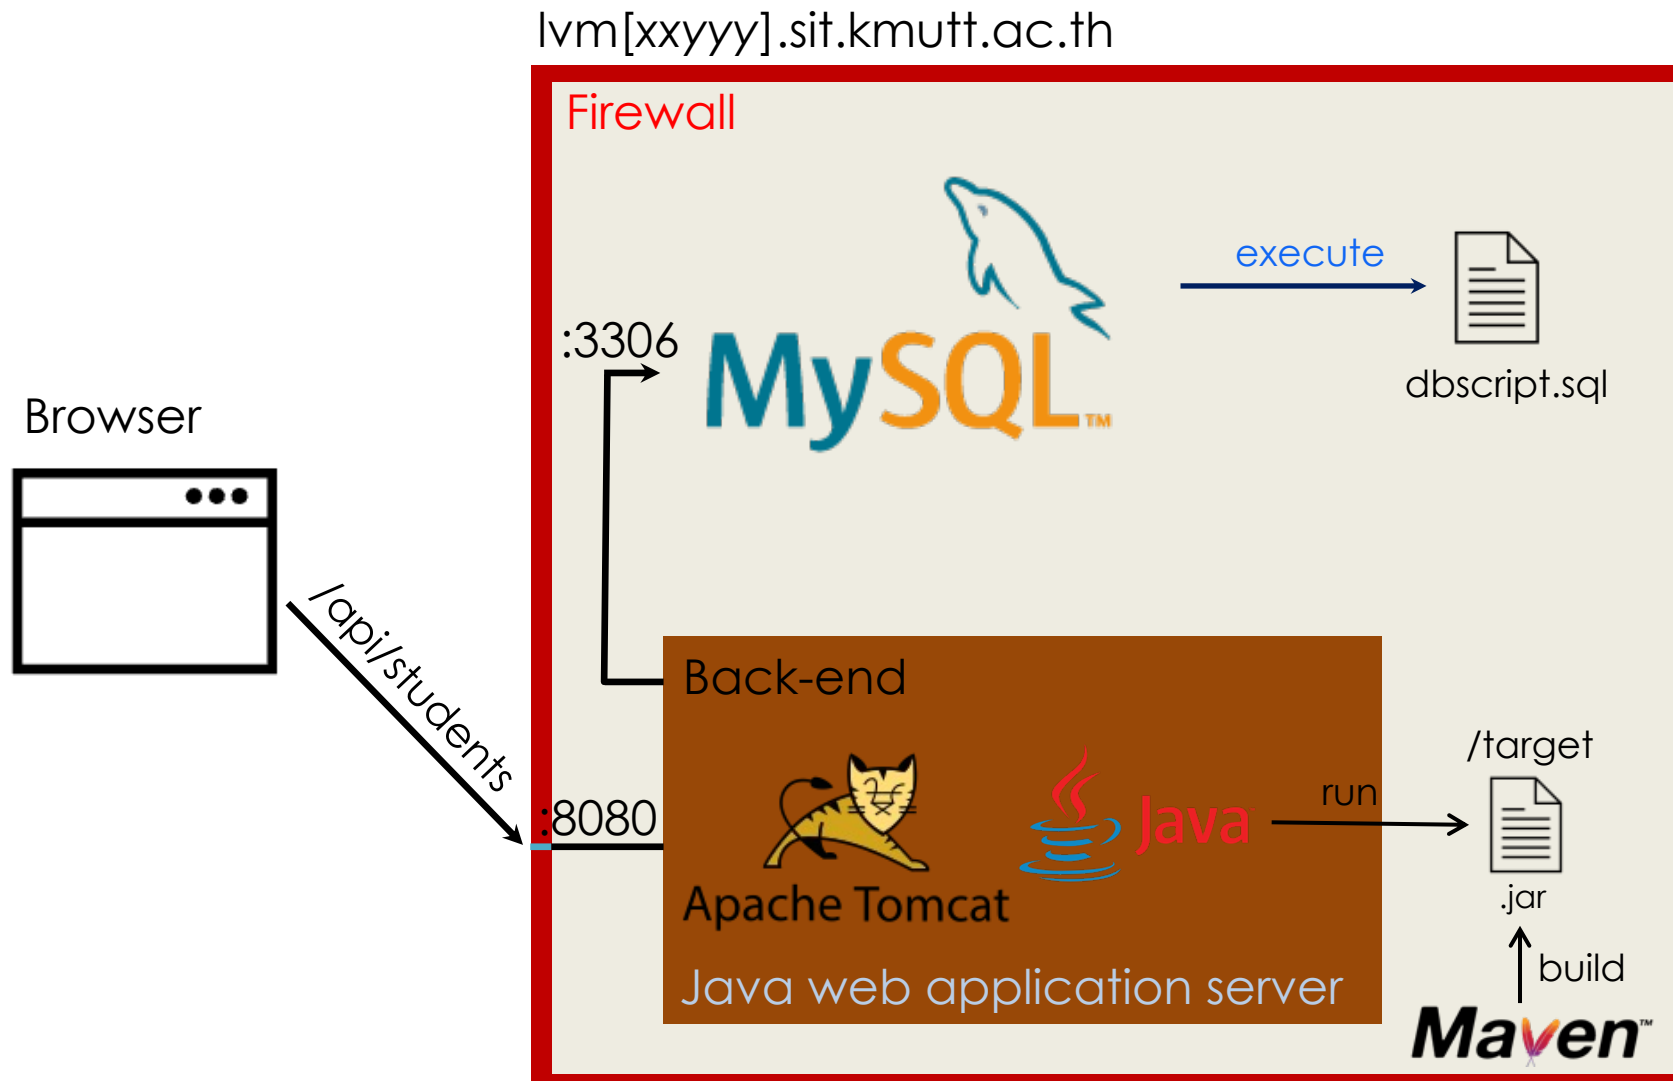

Ensure that Java/Tomcat is running after logout!

## **LAB-07**

# Deploy Spring Boot with Mysql

- Install `mysql-server` and `pwgen`
- Generate random password using `pwgen` (`pwgen -sy 10`)
- Alter mysql root user to authenticate using 'mysql\_native\_password' with the random password.  
Do not forget to record the password securely.
- Secure Mysql installation with 'mysql\_secure\_installation'
  - Remove anonymous users, Disallow root login remotely, Remove test database and access to it

## ○ Test the connection with telnet

```
[sysadmin@lvm65999:~$ telnet localhost 3306 ]
Trying 127.0.0.1...
Connected to localhost.
Escape character is '^]'.
[
8.0.36-0ubuntu0.22.04.14g=C10:l?qJA t.eBY(k|caching_sha2_password2#08S01Got timeout r
eading communication packetsConnection closed by foreign host.
sysadmin@lvm65999:~$ █ ]
```

## ○ Create a database 'school'

## ○ Create 'dev1' user with the password 'x\_eRT2vv4' and all privileges on 'school'

```
scripts — sysadmin@lvm65999: ~ — ssh lvm65999 — 85x34
eading communication packetsConnection closed by foreign host.
[sysadmin@lvm65999:~$ mysql -u root -p
Enter password:
Welcome to the MySQL monitor.  Commands end with ; or \g.
Your MySQL connection id is 53
Server version: 8.0.36-0ubuntu0.22.04.1 (Ubuntu)

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.

[mysql> CREATE DATABASE IF NOT EXISTS school;
Query OK, 1 row affected (0.05 sec)

[mysql> CREATE USER 'dev1' IDENTIFIED BY 'x_eRT2vv4';
Query OK, 0 rows affected (0.07 sec)

[mysql> GRANT ALL ON school.* TO 'dev1';
Query OK, 0 rows affected (0.01 sec)

[mysql> SHOW GRANTS FOR 'dev1';
+-----+
| Grants for dev1@% |
+-----+
| GRANT USAGE ON *.* TO `dev1`@`%` |
| GRANT ALL PRIVILEGES ON `school`.* TO `dev1`@`%` |
+-----+
2 rows in set (0.00 sec)

mysql> █
```

- Run studentdb/dbscript.sql to create student table

```
dbscript.sql
CREATE DATABASE IF NOT EXISTS school;
USE school;
CREATE TABLE student
(
  STDID VARCHAR(11),
  FIRSTNAME VARCHAR(50),
  LASTNAME VARCHAR(50),
  MAJOR CHAR(50),
  CONSTRAINT PKSTUDENT PRIMARY KEY (STDID)
);
```

- Add data to school.student table using redirection

```
studentdb > studentbase.sql
1  USE school;
2  DELETE FROM student;
3
4  INSERT INTO student (STDID,FIRSTNAME,LASTNAME,MAJOR) values ('64130500170','SOMCHAI','JAIDEE','IT');
5  INSERT INTO student (STDID,FIRSTNAME,LASTNAME,MAJOR) values ('64130500280','PETER','CHU','CS');
6  INSERT INTO student (STDID,FIRSTNAME,LASTNAME,MAJOR) values ('64130500460','SOMSRI','RAKREAN','DSI');
7
```

- View data in school.student table

```
studentdb > selectstudent.sql
1  USE school;
2  SELECT * FROM student;
3
```

```
scripts — sysadmin@lvm65999: ~/lab07/studentproj/studentdb — ssh lvm65999 — 85x29
sysadmin@lvm65999:~$ git clone https://github.com/olarnr/int210-studentproj.git lab07/
